FJM Security Innovates Combination Padlocks

Seattle, WA, March 2, 2011 - FJM Security Products announces the addition our new FJM Security Combination Padlock Series ranging from heavy duty all weather padlocks to a new style of locker combination padlock with a master key over-ride and code discovery.

FJM Security's new heavy duty, all weather combination padlocks are available in a short, long and shrouded shackle and have 10,000 possible combinations. The more user friendly, front facing, larger dials are far more preferred with no need to flip the lock up and squint at the small dials as with other padlock brands. The FJM Combination Padlock shackles have no spring loaded components that will corrode or wear out over time. The shackle simply releases at the correct combination with no additional pulling, pushing or slamming to open the shackle! The FJM Combination Padlock are easily resettable and do not require a reset key that can become lost.

FJM Security's new locker padlocks offer a patented new system allowing for master key over-ride AND the ability to discover the combination! This translates into less waste with no need to throw away or cut off padlocks. FJM's combination locker padlock has 10,000 possible combinations and is perfect for schools, gyms, work lockers, etc.
